ApiGear MQTT

Spec v0.1

MQTT v5

We use MQTT v5

Specification: https://docs.oasis-open.org/mqtt/mqtt/v5.0/mqtt-v5.0.html

Topic Mapping Overview

Operations

```
{moduleName} / {interfaceName} / rpc / {functionName}
```

Signals

```
{moduleName} / {interfaceName} / sig / {signalName}
```

Properties

```
{moduleName} / {interfaceName} / prop / {propertyName}
{moduleName} / {interfaceName} / set / {propertyName}
```

Operations 1

Request

Topic: {moduleName} / {interfaceName} / rpc / {functionName}

Content: Data + correlationData(specific function call UUID) + ResponseTopic

Service subscribes, Client(s) publish

Response Topic

Topic: {moduleName} / {interfaceName} / rpc / {functionName} / {ClientID} / result

Content: Data + correlationData(specific function call UUID)

Service publishes, Client(s) subscribe

Operations 2

Internal Requests

-> not defined by API, use underscore before function name

Topic: {moduleName} / {interfaceName} / rpc / _{functionName}

Signals

Request

Topic: {moduleName} / {interfaceName} / sig / {signalName}

Content: Data

Service publishes, Client(s) subscribe

Properties

Get

Topic: {moduleName} / {interfaceName} / prop / {propertyName}

Content: Data

Service publishes, Client(s) subscribe

Retention enabled -> client receives last published data

Set

Topic: {moduleName} / {interfaceName} / set / {propertyName}

Content: Data

Service subscribes, Client(s) publish

Open topics

What should happen if message could not be sent? Queue and try again later?

-> documentation

Should it be possible to actively query properties? -> documentation

Offtopic review:

Review "categories" for the current state of the repositories

- Minor (wording, typos, opinions, white space change/line endings)
- Major (enhancement, architectural changes, performance) -> discussed change/issue
- Blocking (real bugs, pointer, memory leaks)
